# APPLES FOR 2013

Variety Pack—Take your Pick

## How's that Go? An Apple A Day .....

**Apple, Cortland** Produces large red fruit with a sprightly flavor. White flesh maintains its color without browning long after cutting. Excellent for eating and cooking. A very dependable, all around variety released by the New York Experiment Station in 1915. Annual bearer. Ripens late September.

**Apple, Haralred** Juicy and firm with a sweet-tart flavor. A red-fruited selection of Haralson made in LaCrescent, MN. Earlier and sweeter than its parent. Fireblight resistant. Very hardy and dependable. Heavy producer and good keeper. Good for eating, baking and freezing. Unsuitable pollinator for Haralson. Ripens late September/early Oct.

**Apple, Honeycrisp** Explosive crisp fruit has made Honeycrisp the most popular apple of the last decade! Excellent eating quality with sweet/tart flavor and cream-colored flesh. Stores up to 7 months when refrigerated. A Univ. of MN introduction. Ripens late September to early October.

**Apple, Lodi** Yellow skin. Very early ripening with crisp, tart flesh. Large fruit size. Good for making the first pies of the season and for sauce. Keeps better and is firmer than other yellow summer apples. Ripens in July.

**Apple, Red McIntosh** A red sport of McIntosh. Released in Ontario, Canada in 1870. Excellent flavor with white fragrant flesh. Very hardy and heavy producer. An all purpose apple which is good for fresh eating and baking.

**Apple, Zestar!** Finally, a summer apple that has a zesty flavor, crispy crunch, and is juicy besides! Great for eating fresh and cooking. Fruits have a rosy-red blush over a creamy-yellow background. Keeps in refrigerator up to 2 months. Bears annually. A Univ. of Minn. release. Ripens late
