# PLUMS

March 2013

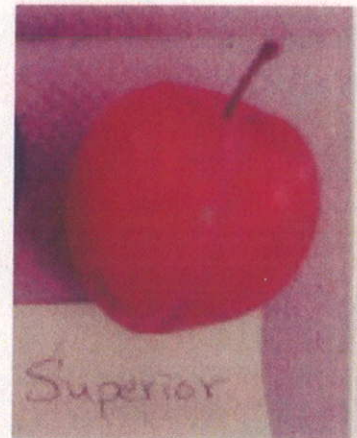

## Black Ice

**Plum, Black Ice** A large-fruited dessert plum with superior winter hardiness. Bred by Prof. Brian Smith of UW-River Falls who spent years crossing cherry plums with Japanese dessert plums. The large, round plums are blue-black with very sweet, juicy, yellow flesh. Fruit ripens in early August, about 2-4 weeks earlier than other plums grown in the Midwest. Naturally dwarf trees require a pollinator--we recommend Toka. Photo Credit: Brian Smith, UWRF

## Superior

**Plum, Superior** Large red fruit with sweet yellow flesh. Good for fresh eating, jelly and jam. Hardy, heavy producer. Bears at an early age. Good fruit quality. Use Toka for pollination. Univ. of MN release in 1933. Ripens late August. Photo Credit: Brian Smith, UWRF

## Toka

**Plum, Toka** Red skin with firm yellow flesh. Rich and spicy flavor. Large, pointed fruit. Heavy producer. Hardy in cold climates. Use Superior as a pollinator. Excellent pollinator for other plum varieties. SD Experiment Station release in 1911. Ripens in mid-August.
